

# CSIS 3280 Work Submission Guidelines

The instructor has the right to conduct a meta-analysis on all the submitted works.

Submitted work that is similar to the work submitted by other students within the same term, other terms or other sections will be considered as a plagiarism.

Sharing the lab assignment to other people will be considered cheating.

Submitted work that has any indication of getting help from other people/students will receive a ZERO mark.

You will get a ZERO mark if you submit back the demo code that the instructor has shared in the class.

Submitted work resulted from plagiarism or cheating will receive a ZERO mark and the students associated with the work will be reported to the Dean office for academic dishonesty case

## Submission Requirements

The naming convention LabXX\_ABcNNNNN should be used as the name of the **Lab's main file** and the **Lab's folder** containing the lab file. Note:

- XX is the lab's number.
- A is the first letter of your first name.
- Bc is the first two letter of your last name (notice that B is capital and c is small letter).
- NNNNN is the last five digits of your student ID number.

The lab/assignment **must be submitted as a zip file** (compressed folder). Other type of compression (tar.gz, tar, bz2, rar) is not acceptable. Please make sure to check whether your zip file can be unzipped and contains all the required files for the lab to work properly.

Example of submission of Lab10 from Joe Douglas whose student ID number is 1234567 should be named as Lab10\_JDo34567.zip. This zip file **must have the following structure**.

Name/structure	Comment
Lab10_JDo34567.zip	Submitted zip file
└─ Lab10_JDo34567	The lab's folder
└─ Lab10_JDo34567.php	The lab's main file
└─ inc	The lab's inc folder containing your function files & folders
└─ Other directories	Other directories, e.g., doc. (if needed)
└─ Other files	Other files (if needed)

Failure in following the naming convention and structure results in mark deduction.

## PHP style guide

Students must observe the PHP Standard Recommendation (PSR) coding and style guides.

- PSR 1 - Basic Coding Style Guide - <https://www.php-fig.org/psr/psr-1/>
- PSR 12 - Extended Coding Style - <https://www.php-fig.org/psr/psr-12/>

Major infractions to these style guides may result in marks deduction.

## Lab Grading Criteria

Each lab assignment is marked and given two points (2% of the grade). I will need to mark hundreds of assignments from all the courses I teach, so it is important that you stick to the naming conventions and guidelines.

Note: Below is the grading criteria for lab assignments. Tests will have different grading criteria. Depending on the quality and completeness of the submitted work, mark adjustment or penalty will be applied in addition to the below criteria.

Mark	Comment
0	Late submission, empty submission, file submission that cannot be opened or the code simply does not run.
0.25	Violating the naming convention, poor programming practice (including but not limited to style and structure), unexpected program behavior, code produces error
0.5	The work is far from complete. However, no error was produced.
1	Significant completion of the lab where no error was produced. Good programming practice and naming convention are followed. Missing only a small portion of the lab requirement.
2	Lab is perfect without producing any error. The implementation of concepts and execution demonstrate mastery and all requirements have been met. The submission fully meeting the guideline requirements.

**Zip your solution folder and submit it through the blackboard!**

### PRE-SUBMISSION CHECKLIST

- Did you zip the file and name it according to the instruction?!
- Double check **\*\*before\*\*** submitting! Try to open your zip file in your computer to make sure.
